# Spectator Rail

Sporting Venues, Spectator & Athlete Safety

# Description

**RCF Spectator rails are the perfect solution for sporting venues where the safety of spectators is paramount, as well as their viewing experience.**

Security Spectator Rail creates a heavy-duty perimeter barrier around the edge of the sports area between athletes and spectators while ensuring that visibility is not compromised. The lower mesh fence area keeps balls from escaping the pitch and provides a solid location where advertising boards can be attached, while the top railing of the spectator rail provides a solid area to lean on. The flush top models of the spectator rail system come at 1030 mm and 1230 mm heights. Depending on your purpose, they can be given either a heavy-duty 868 mesh infill or a lighter 656 mesh infill. They can also be constructed with top and bottom rails for greater stability. The spectator rail systems can be adjusted to rebound mesh for spaces behind goals or multi-use venues

Ideal for most sporting venues, such as:

- GAA pitches
- Rugby pitches
- Soccer pitches
- Athletic grounds
- Tennis courts
- Hockey pitches
